27 Final Words

CHAPTER 01 · SECRETS OF GROWTH

"Your height is 60-80% genetics. The remaining 20-40% is a war you can win."

The Three Pillars

Height is determined by the interaction of three drivers: **genetics**, **hormones**, and **environmental load** (sleep, nutrition, mechanical decompression). You cannot edit your DNA, but the other two are wide open until your growth plates fuse — and even afterward you can reclaim 1–3 cm of *functional* height through posture and spinal decompression.

1. Growth Hormone (GH)

Released in pulses by the anterior pituitary. **~75% of your daily GH is secreted during deep sleep**, specifically in the first two slow-wave cycles. Skipping sleep slashes GH by up to 70%. High-intensity exercise and an empty stomach also trigger GH spikes.

2. IGF-1 (Insulin-like Growth Factor 1)

Liver-produced messenger that actually drives bone elongation at the epiphyseal plates. Requires adequate protein (1.2–1.6 g/kg bodyweight) and zinc to be synthesised correctly.

3. Mechanical Stimulus

Bones respond to load (Wolff's Law) and to *traction*. Decompressive moves — hanging, swimming, inversions — pull stacked vertebrae apart and rehydrate intervertebral discs.

Growth Plate Window

Epiphyseal plates typically close between 16–18 in females and 18–21 in males, though some individuals stay open until 25. As long as wrist and knee X-rays show open plates, linear growth is biologically possible.

"If your plates are open, every night you sleep poorly is a centimeter you give away."

The 4 Levers You Control

- **Sleep architecture** — 8.5–10 h, dark, cool, consistent.
- **Caloric and protein surplus** — you cannot grow tissue you didn't eat.
- **Spinal decompression** — daily hanging + swimming.
- **Hormonal hygiene** — no smoking, alcohol, or chronic stress; manage cortisol.

Genetic Ceiling vs. Realised Height

Mid-parental height predicts your *average* outcome but everyone has a ± 8.5 cm standard deviation. Most people in modern lifestyles realise only 75–85% of their genetic ceiling because of poor sleep, junk food, and a sedentary, hunched lifestyle. Closing that gap is what BeastRootMax is built for.

The classic Tanner-Whitehouse studies measured tens of thousands of children and found that nutritional and sleep interventions during puberty added an average of 4.7 cm compared to control populations. That's two shoe sizes of stature, gained without any drug, surgery, or genetic edit. The body is a willing partner if you feed it the inputs.

The Compound Effect

None of the levers above is magic on its own. A single perfect night of sleep adds nothing. **180 perfect nights stacked with diet and decompression** is what pushes you past the average. Treat this protocol as a system, not a checklist.

Hormonal Cascade Explained

Sleep triggers GHRH (growth-hormone releasing hormone) from the hypothalamus. GHRH tells the pituitary to dump GH. GH travels to the liver, which releases IGF-1. IGF-1 binds to receptors on chondrocytes in the epiphyseal growth plate, triggering cell division and ossification. Each step requires raw materials: protein, zinc, vitamin D, magnesium. Skip any input and the cascade stalls.

Bone Age vs. Chronological Age

A simple wrist X-ray reveals your bone age. If your bone age lags your chronological age by more than 1 year, you have a longer growth runway than your peers. If it's ahead, your growth window is closing faster — prioritise this protocol with extra urgency.

Posture Tax

The average modern teen loses 2–4 cm of standing height to forward head posture, rounded shoulders and anterior pelvic tilt. This is height you already own. The first 30 days of stretching and posture work usually recover it entirely — measurable on a wall with a pencil mark.

Why most height advice fails

Most internet height advice fixates on one variable — usually a supplement or a single stretch. Bodies don't grow off a single input. They grow off a **system** with no weak links. This protocol is engineered as that system.

DEEP DIVE · THE HORMONAL MACHINE

“Master the hormones, master the height.”

Growth Hormone (GH)

GH is released in 6–10 pulses per 24 hours. The largest pulses occur 1–2 h after sleep onset, during stage 3 NREM. A typical adolescent male releases ~700 µg of GH per day; a sleep-deprived one releases ~200 µg. Multiply that gap across 365 nights and you have the difference between average and tall.

IGF-1

IGF-1 binds to chondrocyte receptors at the growth plate. Liver IGF-1 production requires adequate protein (1.4 g/kg+), zinc, and insulin sensitivity. Chronic high blood sugar destroys IGF-1 output.

Testosterone

Drives the late-puberty growth spurt and final ossification. Sleep, vitamin D, zinc, body fat <20%, and resistance training support natural testosterone. Alcohol, late nights, junk food and chronic stress crater it.

Cortisol — the antagonist

Cortisol is catabolic and antagonises GH. Chronic stress (academic pressure, doomscrolling, poor sleep) keeps cortisol elevated and starves your growth window.

Thyroid hormones

T3 and T4 set the pace of every cellular process, including bone turnover. Iodine, selenium and tyrosine support thyroid function.

Insulin sensitivity

Healthy insulin sensitivity allows nutrients to flow into muscle and bone. Walk after meals, lift weights 3x/week, sleep 8.5 h.

CHAPTER 02 · MYTH BUSTER

“Half of what your uncle told you about height is wrong. Let’s audit it.”

MYTH: Coffee stunts growth

Reality: There is zero peer-reviewed evidence linking caffeine to reduced final adult height. The myth comes from a 1980s confounded osteoporosis study. Caffeine can disturb sleep though — and bad sleep *does* stunt growth. So: no coffee after 2 PM.

MYTH: Lifting weights stunts growth

Reality: Supervised resistance training does NOT damage growth plates. Major reviews (BJSM 2014) show youth lifting is safe and even stimulates bone density. The danger is bad form with maximal loads, not the act of lifting.

MYTH: Milk alone makes you tall

Reality: Milk supplies calcium, protein and small amounts of IGF-1 — useful but not magical. Total caloric and protein surplus matters more than any single food.

MYTH: Stretching adds inches permanently

Reality: Stretching restores posture and rehydrates discs (1–3 cm of *functional* height). It does not extend long bones.

MYTH: Basketball makes you taller

Reality: Tall kids self-select into basketball, not the other way around. The jumping does deliver mechanical loading benefits, but volleyball and swimming work equally.

MYTH: Late bloomers always catch up

Reality: Sometimes. Constitutional growth delay does often catch up — but only if hormonal and nutritional foundations are intact. If wrist X-ray shows your bone age lagging chronological age, consult an endocrinologist.

MYTH: Surgery is the only way after 21

Reality: False. Limb-lengthening exists but is brutal and risky. Posture correction, spinal decompression and shoe lifts add 4–8 cm of perceived height for free.

MYTH: Eating eggs daily harms growth

Reality: No. Eggs are one of the most bioavailable protein sources for growing teens. 2–4 whole eggs daily is fine for healthy individuals.

Why these myths persist

Most height myths come from a generation that didn't have sports science. They observed correlation (the tall kid drinks milk) and turned it into causation. Use this rule: if a claim doesn't cite a randomised trial or systematic review, treat it as folklore.

CHAPTER 03 · BASIC STRETCH PROTOCOL

Decompression: the cheapest centimeter you'll ever earn.

These five movements form the Tier-1 stretch stack. Done daily for 12 minutes, they rehydrate the spine, lengthen the hip flexors, and unwind the thoracic curve created by phones and desks.

Bar Hang

Target: Spine, lats, shoulders

Sets / Reps: 3 × 30–45 sec

Form cues: Relax fully, let bodyweight pull. Breathe slowly through nose.

Avoid: Don't shrug or grip white-knuckle tight.

Cobra Stretch

Target: Lower back, abs, chest

Sets / Reps: 3 × 30 sec

Form cues: Press hips down, lift chest, look up. Elbows soft.

Avoid: Don't crunch the lumbar spine — drive length, not bend.

Cat-Cow Flow

Target: Whole spine mobility

Sets / Reps: 10 slow reps

Form cues: Move with the breath: inhale arch, exhale round.

Avoid: Don't rush — this is mobility, not cardio.

Forward Fold

Target: Hamstrings, calves, lower back

Sets / Reps: 3 × 45 sec

Form cues: Soft knees, hinge from hips, let head hang heavy.

Avoid: Don't bounce or lock the knees out.

Pelvic Tilt Bridge

Target: Glutes, hip flexors, core

Sets / Reps: 3 × 12 reps

Form cues: Squeeze glutes hard at the top, hold 2 sec.

Avoid: Don't hyperextend the lower back.

Daily 12-minute Routine

Morning (5 min): Bar Hang 2×30s, Cat-Cow 10 reps, Cobra 2×30s. Evening (7 min): full stack above. Consistency beats intensity — miss days, lose inches.

DEEP DIVE · STRETCH SCIENCE

"Why your spine is 1.5 cm taller in the morning."

Disc rehydration

Intervertebral discs are 80% water. During the day, gravity squeezes water out; at night, lying down lets them rehydrate. Hanging 60 sec in the morning AND before bed maximises the daily disc cycle.

Fascia release

Fascia is connective tissue wrapping every muscle and organ. Chronic sitting glues fascia into shortened patterns. Foam rolling 5 min/day and slow static stretches 30+ sec restore elasticity.

Nerve flossing

Sciatic and brachial nerves can adhere to surrounding tissue. Cat-cow + neck rotations + ankle pumps mobilise nerves and reduce pulling forces on the spine.

Mobility vs flexibility

Flexibility is passive (how far it can be stretched). Mobility is active (how far you can control). For height work, mobility wins.

Extended 20-minute routine

- Bar hang 3×60s · Cat-cow 15 reps · Cobra 3×30s · Forward fold 3×45s
- Lying spinal twist 2×30s/side · Pigeon 2×45s/side · Wall angels 3×12
- Doorway pec 3×30s · Thread the needle 2×30s/side · Child's pose 2 min

Pigeon Pose

Target: Hip flexors, glutes, IT band

Sets / Reps: 2 × 45 sec/side

Form cues: Front shin parallel to mat front; sink hips down evenly.

Avoid: Don't dump weight onto the front knee.

Lying Spinal Twist

Target: Spine rotation, glutes

Sets / Reps: 2 × 30 sec/side

Form cues: Shoulders flat on floor, knees stacked.

Avoid: Don't force knees to floor — let gravity work.

Thread the Needle

Target: Thoracic mobility

Sets / Reps: 2 × 30 sec/side

Form cues: From hands and knees, slide arm under and across.

Avoid: Don't shrug or compress the neck.

DEEP DIVE · POSTURE PROTOCOL

"Posture is height you already paid for. Stop giving it away."

The phone-neck epidemic

Every inch your head moves forward of your shoulders adds ~4.5 kg of effective load on the cervical spine. Most teens spend 6–8 h/day in this position, losing 2–4 cm of stature.

Daily posture audits

- Wall test: stand against wall, heels/butt/shoulders/head touching.
- Photo test: side photo every Sunday.
- Ear-shoulder line: ear should sit directly above the shoulder.

The 5-move corrective stack

- Wall angels (3×12)
- Chin tucks (3×15)
- Doorway pec stretch (3×30s)
- Thoracic foam roll (2 min)
- Glute bridge (3×12)

Workplace ergonomics

- Monitor top at eye level.
- Feet flat; knees at 90°.
- Stand 5 min every 30 min.
- Phone at eye level, not waist.

CHAPTER 04 · WHAT TO AVOID

"You don't grow by adding good things. You grow by removing the bleed."

Sleeping less than 8 hours

Cuts nightly GH by up to 70%. Every hour stolen is a tax on growth.

Smoking & vaping

Nicotine constricts blood vessels and lowers IGF-1. Direct height killer.

Alcohol before sleep

Destroys deep sleep architecture; suppresses GH pulses for that night.

Heavy compressive loading too early

Max-effort squats and deadlifts before age 16 with bad form can stress growth plates. Use moderate loads with perfect form.

Junk-heavy, low-protein diets

Empty calories spike insulin and crowd out the amino acids your body needs to build bone matrix and muscle.

Slouching all day

Compresses discs, ages your spine 10 years, and steals 2–4 cm of stature you literally already own.

Chronic stress

High cortisol antagonises growth hormone. Manage it with breathwork, sleep, outdoor walking.

Skipping breakfast

Your post-fast meal sets the day's anabolic tone — protein within 60 min of waking.

The Subtraction Principle

Most teens already know they should sleep more and eat better. They keep failing because they try to add discipline on top of an unaudited life. Audit and remove first; the good habits stick faster on a clean baseline.

CHAPTER 05 · DETAILED DIET CHART

Growth foods: protein dense, micronutrient rich, easily digested.

Macro Targets (per kg bodyweight)

- Protein: 1.4 – 1.8 g/kg
- Carbs: 4 – 6 g/kg (complex sources)
- Fats: 0.8 – 1.0 g/kg (omega-3 priority)
- Calories: bodyweight × 35–40 kcal (slight surplus)

Micronutrient Priorities

- Calcium 1200 mg, Vitamin D3 1000–2000 IU, Magnesium 400 mg
- Zinc 15 mg, Vitamin K2 90 mcg, Iron 12–15 mg

Sample Day (1 of many)

Time	Meal	Protein	Carbs	Fats
7:00	4 eggs + oats + milk + banana	32 g	75 g	18 g

Time	Meal	Protein	Carbs	Fats
10:30	Greek yogurt + almonds + honey	18 g	30 g	14 g
13:30	Chicken / paneer + rice + veg + salad	45 g	90 g	15 g
17:00	Whey shake + peanut butter + toast	28 g	40 g	12 g
20:30	Fish or eggs + roti + sabz + gurd	38 g	65 g	20 g
22:30	Warm milk + 2 dates	10 g	25 g	8 g

Hydration

3.5 – 4.5 L water/day. Discs rehydrate overnight only if you're hydrated; chronic dehydration shortens you measurably.

CHAPTER 06 · ROOTMAX EXERCISES

“Decompress, then load. Skip step one and you build a stronger short person.”

The RootMax stack is built on three categories: **decompression**, **posterior chain activation**, and **spinal traction**. Run the full circuit 4 days/week.

Dead Hang

Target: Spinal traction

Sets / Reps: 3 × 45–60 sec

Form cues: Full body weight, completely relaxed shoulders.

Avoid: Don't kip or swing.

Inverted Hang (assisted)

Target: Decompression

Sets / Reps: 2 × 20 sec

Form cues: Use inversion table or partner-assist on bar.

Avoid: Skip if you have any retinal issues.

Swimming (Freestyle)

Target: Whole body lengthening

Sets / Reps: 30 min, 2x/week

Form cues: Long reaching strokes; full extension every pull.

Avoid: Don't rush stroke rate.

Cobra Push-Up

Target: Thoracic mobility

Sets / Reps: 3 × 12

Form cues: Drive chest forward, eyes up, arch fully.

Avoid: Don't dump the lower back.

Single-Leg Bridge

Target: Glute/hip drive

Sets / Reps: 3 × 10/side

Form cues: Squeeze glute hard, drive heel through floor.

Avoid: Don't push through the toe.

Wall Angels

Target: Postural reset

Sets / Reps: 3 × 12

Form cues: Back/head/arms touching wall; slow controlled.

Avoid: Don't shrug or arch lumbar.

Jump Squat

Target: Bone loading

Sets / Reps: 3 × 8

Form cues: Land soft, knees track over toes, full hip extension at top.

Avoid: Don't land stiff-legged.

CHAPTER 07 · 4-WEEK DIET CHART

"A diet only works if you can repeat it 28 days straight."

WEEK 1

Day	Breakfast	Lunch	Snack	Dinner
Mon	Eggs + oats	Chicken rice bowl	Yogurt + nuts	Fish + roti + sabzi
Tue	Paneer paratha + milk	Dal + rice + salad	Whey shake	Eggs + quinoa
Wed	Smoothie bowl + seeds	Chicken wrap	Boiled chana	Paneer curry + roti
Thu	Oats + banana + milk	Rajma + rice	Apple + almonds	Grilled fish + veg
Fri	Eggs + toast + avocado	Tofu stir-fry + rice	Cottage cheese	Mutton/soya curry + roti
Sat	Pancakes + peanut butter	Pasta + chicken	Trail mix	Khichdi + curd
Sun	Cheat-clean: dosa + sambar	Family meal balanced	Fruit	Soup + paneer tikka

Week 1 progressive note: add 100 kcal/day surplus. Track bodyweight morning fasted; aim for +0.2–0.3 kg/week.

WEEK 2

Day	Breakfast	Lunch	Snack	Dinner
Mon	Eggs + oats	Chicken rice bowl	Yogurt + nuts	Fish + roti + sabzi
Tue	Paneer paratha + milk	Dal + rice + salad	Whey shake	Eggs + quinoa
Wed	Smoothie bowl + seeds	Chicken wrap	Boiled chana	Paneer curry + roti
Thu	Oats + banana + milk	Rajma + rice	Apple + almonds	Grilled fish + veg
Fri	Eggs + toast + avocado	Tofu stir-fry + rice	Cottage cheese	Mutton/soya curry + roti
Sat	Pancakes + peanut butter	Pasta + chicken	Trail mix	Khichdi + curd
Sun	Cheat-clean: dosa + sambar	Family meal balanced	Fruit	Soup + paneer tikka

Week 2 progressive note: add 100 kcal/day surplus. Track bodyweight morning fasted; aim for +0.2–0.3 kg/week.

WEEK 3

Day	Breakfast	Lunch	Snack	Dinner
Mon	Eggs + oats	Chicken rice bowl	Yogurt + nuts	Fish + roti + sabzi
Tue	Paneer paratha + milk	Dal + rice + salad	Whey shake	Eggs + quinoa
Wed	Smoothie bowl + seeds	Chicken wrap	Boiled chana	Paneer curry + roti
Thu	Oats + banana + milk	Rajma + rice	Apple + almonds	Grilled fish + veg
Fri	Eggs + toast + avocado	Tofu stir-fry + rice	Cottage cheese	Mutton/soya curry + roti
Sat	Pancakes + peanut butter	Pasta + chicken	Trail mix	Khichdi + curd
Sun	Cheat-clean: dosa + sambar	Family meal balanced	Fruit	Soup + paneer tikka

Week 3 progressive note: add 100 kcal/day surplus. Track bodyweight morning fasted; aim for +0.2–0.3 kg/week.

WEEK 4

Day	Breakfast	Lunch	Snack	Dinner
Mon	Eggs + oats	Chicken rice bowl	Yogurt + nuts	Fish + roti + sabzi
Tue	Paneer paratha + milk	Dal + rice + salad	Whey shake	Eggs + quinoa
Wed	Smoothie bowl + seeds	Chicken wrap	Boiled chana	Paneer curry + roti
Thu	Oats + banana + milk	Rajma + rice	Apple + almonds	Grilled fish + veg
Fri	Eggs + toast + avocado	Tofu stir-fry + rice	Cottage cheese	Mutton/soya curry + roti
Sat	Pancakes + peanut butter	Pasta + chicken	Trail mix	Khichdi + curd
Sun	Cheat-clean: dosa + sambar	Family meal balanced	Fruit	Soup + paneer tikka

Week 4 progressive note: add 100 kcal/day surplus. Track bodyweight morning fasted; aim for +0.2–0.3 kg/week.

CHAPTER 08 · POWER OF SLEEP

Growth happens in the dark. Literally.

Why sleep is non-negotiable

Up to 75% of daily growth hormone is released during slow-wave sleep, peaking in the first two cycles (roughly 11 PM – 2 AM if you sleep at 10:30). Sleep also clears cortisol, repairs muscle, consolidates motor learning, and rebuilds bone matrix.

The 7 sleep rules

- Same sleep & wake time, including weekends (± 30 min).
- Cool room (18–20°C). Heat destroys deep sleep.
- Pitch black. Even a standby LED costs you minutes of melatonin.
- No screens 60 min before bed. Blue light delays melatonin by ~90 min.
- No caffeine after 2 PM. Half-life is 6 hours.
- Last meal 2 h before bed; no high-sugar snacks.
- 10 min wind-down: reading, breathwork, stretching.

Pre-sleep stack

- Warm milk + 1 tsp honey (tryptophan + insulin nudge).

- 400 mg magnesium glycinate.
- 4-7-8 breathing × 4 cycles.

CHAPTER 09 · GROWTH KITCHEN

“Every chapter is theory until you cook it.”

Top 15 Growth Foods

Food	Why it matters
Eggs	Complete protein, choline, vitamin D
Milk & curd	Calcium, casein, IGF-1
Paneer / cottage cheese	Slow-release protein, calcium
Chicken breast	Lean protein, B12, zinc
Salmon / sardines	Omega-3, vitamin D, calcium
Almonds & walnuts	Magnesium, healthy fats, vitamin E
Spinach & kale	Vitamin K2, folate, iron
Bananas	Potassium, fast carbs, B6
Sweet potato	Complex carbs, vitamin A
Quinoa	Complete plant protein, fiber
Greek yogurt	Protein, probiotics, calcium
Soy / tofu	Plant protein, isoflavones
Oats	Slow carbs, beta-glucan, magnesium
Berries	Antioxidants, vitamin C for collagen
Pumpkin seeds	Zinc powerhouse

3 Signature Growth Recipes

BEAST SHAKE

1 cup milk · 1 banana · 1 scoop whey · 1 tbsp peanut butter · 1 tsp honey · 5 almonds · pinch cinnamon. Blend. ~480 kcal / 38 g protein.

ROOT BOWL

1 cup quinoa · 150 g grilled chicken or paneer · spinach · roasted sweet potato · tahini drizzle · pumpkin seeds. ~620 kcal / 45 g protein.

NIGHT MILK

1 cup warm whole milk · 1 tsp honey · pinch turmeric · 2 dates. Drink 30 min before sleep. Tryptophan + magnesium + slow casein.

BONUS · 12 RECIPES FOR GROWTH

If you can microwave, you can cook these.

BEAST OATS

60 g rolled oats · 300 ml whole milk · 1 banana · 1 tbsp peanut butter · 5 almonds · 1 tsp honey. Cook oats in milk 5 min. Top with the rest. ~580 kcal / 25 g protein.

PANEER BHURJI BOWL

200 g paneer crumbled · 1 onion · 1 tomato · 1 chilli · turmeric · garam masala · 1 tbsp ghee. Fry onion+tomato 5 min, add paneer 3 min. Serve with 2 rotis. ~620 kcal / 38 g protein.

CHICKEN-RICE POWER BOWL

150 g grilled chicken · 1 cup brown rice · sautéed spinach · 1 tbsp olive oil. ~640 kcal / 48 g protein.

MASALA OMELETTE STACK

4 eggs · onion · tomato · chilli · coriander. Cook flat, fold over. Serve with 2 wholewheat toasts. ~480 kcal / 32 g protein.

DAL-RICE COMPLETE

1 cup rice + 1 cup dal (toor or moong) + ghee + ginger. Combined makes a complete amino profile. ~520 kcal / 22 g protein.

RAJMA WRAP

Rajma curry · 1 wholewheat tortilla · onion · curd · coriander. ~440 kcal / 20 g.

GROWTH SMOOTHIE

300 ml milk · 1 banana · 1 scoop whey · 1 tbsp peanut butter · 1 tsp cocoa · 5 almonds. Blend. ~520 kcal / 38 g protein.

SALMON FOIL BAKE

150 g salmon · lemon · garlic · olive oil. Bake 200°C 12 min. Serve with sweet potato + greens. ~520 kcal / 35 g protein.

TOFU STIR-FRY

200 g tofu · broccoli · capsicum · soy sauce · garlic · sesame oil. Stir-fry 5 min. Serve with rice. ~520 kcal / 28 g protein.

KHICHDI ELITE

½ cup rice · ½ cup moong dal · ghee · ginger · cumin · turmeric. Pressure-cook 3 whistles. Top with curd. ~480 kcal / 22 g.

EGG-PANEER WRAP

2 eggs scrambled + 100 g paneer + 1 wholewheat wrap + curd dressing. ~540 kcal / 36 g protein.

NIGHT MILK STACK

300 ml warm milk + 2 dates + 1 tsp honey + pinch of nutmeg. ~280 kcal / 10 g. Drink 30 min before sleep.

BONUS · REGIONAL DIET PLAYBOOK

"The best diet is one your grandmother already cooks."

North Indian

Lean into rajma, chole, dal makhani, paneer dishes, curd, lassi (unsweetened), tandoori chicken, eggs, makke ki roti. Use ghee, don't drown in it.

South Indian

Idli + sambar + coconut chutney is a near-perfect protein+carb breakfast. Add 2 boiled eggs. Lean on curd rice with veg, fish curry, chicken Chettinad, ragi mudde for calcium.

Bengali / Eastern

Fish daily is a height cheat code: omega-3 + complete protein + vitamin D. Add chenna, moong dal, leafy shaak. Limit fried snacks.

Vegetarian / Jain

Soak and sprout legumes for bioavailability. Combine grains+legumes (dal+rice, roti+chana). Use paneer, curd, tofu, tempeh, hemp seeds, chia. Vegans must supplement B12.

Budget plan (■100/day)

- 3 eggs (■18) · 500 ml milk (■30) · ½ cup dal (■10) · ½ kg banana (■20) · 1 cup soya chunks (■10) · spinach + onion + tomato (■12)
- Macros: ~110 g protein · ~2400 kcal · all on ■100

CHAPTER 10 · PROPER SLEEP POSTURE

Spine alignment during 8 hours = 1/3 of your day. Get it right.

Best positions, ranked

- **Back sleeping with thin pillow** — best spinal alignment.
- **Side sleeping with pillow between knees** — good for hip alignment.
- **Stomach sleeping** — *worst*; rotates the cervical spine all night.

The setup

- Mattress: medium-firm orthopaedic or hybrid foam.
- Pillow: contour or low-loft (cervical neutral).
- Knee pillow if side-sleeper.
- No pillow under the lower back; small lumbar roll if you sag.

Pre-sleep decompression ritual (5 min)

- 2 min hanging from bar.
- 1 min cat-cow.

- 1 min child's pose.
- 1 min lying spinal twist each side.

CHAPTER 11 · NECESSARY SUPPLEMENTS

Supplements fill gaps. They do not replace food, sleep or training.

"If your diet is trash, no pill will fix you. Eat first."

Vitamin D3

Dose: 1000–2000 IU/day

Why: Critical for calcium absorption and IGF-1. Most teens are deficient.

Magnesium glycinate

Dose: 300–400 mg before bed

Why: Improves deep-sleep duration; cofactor for 300 enzymes.

Zinc picolinate

Dose: 15 mg/day with food

Why: Required for testosterone and IGF-1 synthesis.

Omega-3 (EPA+DHA)

Dose: 1.5–2 g/day

Why: Anti-inflammatory; supports brain and joint health.

Whey protein

Dose: 1 scoop post-workout / shake

Why: Convenient way to hit protein targets.

Creatine monohydrate

Dose: 3–5 g/day

Why: Strength, recovery, indirectly supports bone via load tolerance.

Vitamin K2 (MK-7)

Dose: 90–120 mcg/day

Why: Directs calcium into bone, away from arteries.

Ashwagandha (KSM-66)

Dose: 300–600 mg/day

Why: Lowers cortisol; cortisol antagonises growth.

Disclaimer: Consult a physician before starting any supplement, especially if you are under 18 or on medication.

CHAPTER 12 · ROOTMAX SECRET EXERCISES

“These are the 6 movements we never put on social media.”

Loaded Hang

Target: Spine, lats

Sets / Reps: 3 × 20 sec, +5–10 kg dumbbell between feet

Form cues: Keep shoulders packed; full body relaxation below.

Avoid: Skip if shoulder mobility is restricted.

Inversion Boots Hang

Target: Full spine traction

Sets / Reps: 2 × 60 sec

Form cues: Hands across chest, breathe through nose only.

Avoid: Stop if eyes feel pressure.

Pike-Press Decompression

Target: Shoulders, T-spine

Sets / Reps: 3 × 8

Form cues: Pike pushup to overhead lockout, fully extending spine on top.

Avoid: Don't shrug at lockout.

Suspended Cobra

Target: Front-line stretch

Sets / Reps: 3 × 30 sec

Form cues: TRX or strap, hover above floor, chest forward, eyes up.

Avoid: Don't crank lower back beyond comfort.

Slow Eccentric Box Jump

Target: Tibial loading

Sets / Reps: 4 × 5

Form cues: Explode up, 3-second eccentric down.

Avoid: Don't drop with locked knees.

Spinal Twist Hang

Target: Obliques, intercostals

Sets / Reps: 2 × 30s/side

Form cues: Hang and rotate slowly side to side.

Avoid: Don't swing momentum.

CHAPTER 13 · 8-WEEK DIET PLAN

“Eight weeks separates the curious from the transformed.”

WEEK 1 · Phase: Foundation

Day	Breakfast	Lunch	Snack	Dinner
Mon	5 eggs + oats	Chicken rice + dal	Whey + banana	Fish + sweet potato
Tue	Paneer paratha + milk	Beef/soy + quinoa	Yogurt + nuts	Eggs + roti
Wed	Smoothie + seeds	Chicken wrap + salad	Cottage cheese	Paneer curry + rice
Thu	Oats + banana + whey	Rajma + rice	Apple + PB	Grilled fish + veg
Fri	Eggs + toast + avocado	Tofu stir-fry + rice	Trail mix	Mutton/soya + roti
Sat	Pancakes + PB + milk	Pasta + chicken	Greek yogurt	Khichdi + paneer
Sun	Family clean meal	Family meal balanced	Fruit + nuts	Soup + tikka

Calorie target Week 1: ~2800 kcal · **Protein:** ~105 g · **Hydration:** 4 L

WEEK 2 · Phase: Foundation

Day	Breakfast	Lunch	Snack	Dinner
Mon	5 eggs + oats	Chicken rice + dal	Whey + banana	Fish + sweet potato
Tue	Paneer paratha + milk	Beef/soy + quinoa	Yogurt + nuts	Eggs + roti
Wed	Smoothie + seeds	Chicken wrap + salad	Cottage cheese	Paneer curry + rice
Thu	Oats + banana + whey	Rajma + rice	Apple + PB	Grilled fish + veg
Fri	Eggs + toast + avocado	Tofu stir-fry + rice	Trail mix	Mutton/soya + roti
Sat	Pancakes + PB + milk	Pasta + chicken	Greek yogurt	Khichdi + paneer
Sun	Family clean meal	Family meal balanced	Fruit + nuts	Soup + tikka

Calorie target Week 2: ~2900 kcal · **Protein:** ~105 g · **Hydration:** 4 L

WEEK 3 · Phase: Build

Day	Breakfast	Lunch	Snack	Dinner
Mon	5 eggs + oats	Chicken rice + dal	Whey + banana	Fish + sweet potato

Day	Breakfast	Lunch	Snack	Dinner
Tue	Paneer paratha + milk	Beef/soy + quinoa	Yogurt + nuts	Eggs + roti
Wed	Smoothie + seeds	Chicken wrap + salad	Cottage cheese	Paneer curry + rice
Thu	Oats + banana + whey	Rajma + rice	Apple + PB	Grilled fish + veg
Fri	Eggs + toast + avocado	Tofu stir-fry + rice	Trail mix	Mutton/soya + roti
Sat	Pancakes + PB + milk	Pasta + chicken	Greek yogurt	Khichdi + paneer
Sun	Family clean meal	Family meal balanced	Fruit + nuts	Soup + tikka

Calorie target Week 3: ~3000 kcal · Protein: ~105 g · Hydration: 4 L

WEEK 4 · Phase: Build

Day	Breakfast	Lunch	Snack	Dinner
Mon	5 eggs + oats	Chicken rice + dal	Whey + banana	Fish + sweet potato
Tue	Paneer paratha + milk	Beef/soy + quinoa	Yogurt + nuts	Eggs + roti
Wed	Smoothie + seeds	Chicken wrap + salad	Cottage cheese	Paneer curry + rice
Thu	Oats + banana + whey	Rajma + rice	Apple + PB	Grilled fish + veg
Fri	Eggs + toast + avocado	Tofu stir-fry + rice	Trail mix	Mutton/soya + roti
Sat	Pancakes + PB + milk	Pasta + chicken	Greek yogurt	Khichdi + paneer
Sun	Family clean meal	Family meal balanced	Fruit + nuts	Soup + tikka

Calorie target Week 4: ~3100 kcal · Protein: ~105 g · Hydration: 4 L

WEEK 5 · Phase: Build

Day	Breakfast	Lunch	Snack	Dinner
Mon	5 eggs + oats	Chicken rice + dal	Whey + banana	Fish + sweet potato
Tue	Paneer paratha + milk	Beef/soy + quinoa	Yogurt + nuts	Eggs + roti
Wed	Smoothie + seeds	Chicken wrap + salad	Cottage cheese	Paneer curry + rice
Thu	Oats + banana + whey	Rajma + rice	Apple + PB	Grilled fish + veg
Fri	Eggs + toast + avocado	Tofu stir-fry + rice	Trail mix	Mutton/soya + roti
Sat	Pancakes + PB + milk	Pasta + chicken	Greek yogurt	Khichdi + paneer
Sun	Family clean meal	Family meal balanced	Fruit + nuts	Soup + tikka

Calorie target Week 5: ~3200 kcal · **Protein:** ~105 g · **Hydration:** 4 L

WEEK 6 · Phase: Peak

Day	Breakfast	Lunch	Snack	Dinner
Mon	5 eggs + oats	Chicken rice + dal	Whey + banana	Fish + sweet potato
Tue	Paneer paratha + milk	Beef/soy + quinoa	Yogurt + nuts	Eggs + roti
Wed	Smoothie + seeds	Chicken wrap + salad	Cottage cheese	Paneer curry + rice
Thu	Oats + banana + whey	Rajma + rice	Apple + PB	Grilled fish + veg
Fri	Eggs + toast + avocado	Tofu stir-fry + rice	Trail mix	Mutton/soya + roti
Sat	Pancakes + PB + milk	Pasta + chicken	Greek yogurt	Khichdi + paneer
Sun	Family clean meal	Family meal balanced	Fruit + nuts	Soup + tikka

Calorie target Week 6: ~3300 kcal · **Protein:** ~105 g · **Hydration:** 4 L

WEEK 7 · Phase: Peak

Day	Breakfast	Lunch	Snack	Dinner
Mon	5 eggs + oats	Chicken rice + dal	Whey + banana	Fish + sweet potato
Tue	Paneer paratha + milk	Beef/soy + quinoa	Yogurt + nuts	Eggs + roti
Wed	Smoothie + seeds	Chicken wrap + salad	Cottage cheese	Paneer curry + rice
Thu	Oats + banana + whey	Rajma + rice	Apple + PB	Grilled fish + veg
Fri	Eggs + toast + avocado	Tofu stir-fry + rice	Trail mix	Mutton/soya + roti
Sat	Pancakes + PB + milk	Pasta + chicken	Greek yogurt	Khichdi + paneer
Sun	Family clean meal	Family meal balanced	Fruit + nuts	Soup + tikka

Calorie target Week 7: ~3400 kcal · **Protein:** ~105 g · **Hydration:** 4 L

WEEK 8 · Phase: Peak

Day	Breakfast	Lunch	Snack	Dinner
Mon	5 eggs + oats	Chicken rice + dal	Whey + banana	Fish + sweet potato
Tue	Paneer paratha + milk	Beef/soy + quinoa	Yogurt + nuts	Eggs + roti

Day	Breakfast	Lunch	Snack	Dinner
Wed	Smoothie + seeds	Chicken wrap + salad	Cottage cheese	Paneer curry + rice
Thu	Oats + banana + whey	Rajma + rice	Apple + PB	Grilled fish + veg

Sat	Pancakes + PB + milk	Pasta + chicken	Greek yogurt	Khichdi + paneer
Sun	Family clean meal	Family meal balanced	Fruit + nuts	Soup + tikka

Calorie target Week 8: ~3500 kcal · Protein: ~105 g · Hydration: 4 L

CHAPTER 14 · PERSONALIZED INSTAGRAM SUPPORT

"You don't need motivation. You need a coach who answers."

Every Elite member gets direct DM access to @beastrootmax for 90 days from purchase. Here's how to use it for maximum return.

How it works

- DM your order screenshot to confirm activation.
- Send a weekly check-in: bodyweight, sleep avg, training adherence, photos.
- Reply turnaround: 24 h on weekdays.

What to ask

- Form checks (record short videos).
- Diet substitutions for your region/budget.
- Plateau breakers — programming tweaks.
- Sleep & stress troubleshooting.

What we cannot do

- Diagnose medical conditions. See a doctor for that.
- Promise specific cm gains — biology varies.

Onboarding checklist

- Take front, side and back photos in tight clothes against a plain wall.
- Measure standing height first thing in the morning, after 5 min hanging.
- Log sleep with a free app (Sleep Cycle / AutoSleep).
- Send all of the above in your first DM.

BONUS · MINDSET OF THE MAXED

"Discipline is choosing what you want most over what you want now."

Heightmaxxing is a 6-12 month identity shift, not a 30-day challenge. The boys who finish the protocol all share four traits: they sleep on schedule even on weekends; they eat in a slight surplus without bingeing; they hang every single day; they don't post their results until they have results.

Daily 5-minute check-in

- Did I sleep ≥ 8.5 h?
- Did I hit protein target?
- Did I hang ≥ 90 sec?
- Did I sit slouched today (and how often)?
- One thing I'll fix tomorrow.

The 1% rule

Each lever — sleep, food, decompression, posture, supplements — adds maybe 1% to your final outcome. Stack five of them daily and you compound. Skip three of them and you're flat.

BONUS · HEIGHT PSYCHOLOGY

“How you carry your height matters as much as the centimeters.”

Two men of the same stature can be perceived 4–5 cm apart depending on posture, eye contact, voice projection and stride length. None of this requires another centimeter of bone.

The 4 perceived-height multipliers

- **Posture:** shoulders back, chest open, chin parallel to floor.
- **Eye contact:** look slightly above eye level when you greet someone.
- **Voice:** deeper, slower, pause-rich speech reads as larger presence.
- **Stride:** longer, slower steps; never rush.

Wardrobe levers

- Vertical lines, monochrome outfits, V-necks, structured shoulders.
- Slim-fit (not skinny) trousers; high-rise.
- Quality boots with 1–2 cm heel — natural lift, no one notices.

Mental anchors

Pick one tall reference. Spend 30 seconds visualising their stance every morning before the mirror. Mirror neurons do the rest.

BONUS · PROGRESS TRACKING

Measure morning height (after 5 min hanging) every Sunday. Track the moving average — daily noise is ± 1.5 cm depending on hydration and time of day.

Weekly log template

Week	Height (cm)	Weight (kg)	Sleep avg	Adherence %
1	—	—	—	—
2	—	—	—	—
3	—	—	—	—
4	—	—	—	—
5	—	—	—	—
6	—	—	—	—
7	—	—	—	—
8	—	—	—	—

BONUS · TROUBLESHOOTING

"Every plateau has a cause. Find it, kill it, keep moving."

Not sleeping deeply

Check room temperature (18–20°C), block all light, no screens 60 min before bed, magnesium glycinate 400 mg. Track with a sleep app for 7 days.

Plateau on the scale

Add 200 kcal/day for 2 weeks. Often the issue is under-eating.

Lower back hurts after stretching

You're hyperextending. Lead with the chest. Skip cobra for a week, substitute child's pose + cat-cow only.

Cannot hang for 30 seconds

Build grip with dead hangs of 10 sec, 4 rounds, 2x daily. Within 3 weeks you'll hit 30.

Diet is too expensive

Use the regional ■100/day plan. Eggs, dal, milk, soya, banana, spinach. That's it.

Family skeptical

Show them the science. Then let your results talk after 90 days.

Acne flaring up

Likely milk + sugar combo. Reduce dairy to 300 ml, cut added sugar, add zinc 15 mg, omega-3 2 g.

Energy crashes mid-day

Blood sugar spikes from refined carbs. Switch to oats, brown rice, lentils. Walk 10 min after every meal.

BONUS · SAFETY & MEDICAL NOTES

"This protocol is education, not prescription."

Who should consult a doctor first

- Anyone under 14 starting structured supplementation.
- Anyone with diagnosed scoliosis, kyphosis, or disc herniation.
- Anyone with endocrine conditions (thyroid, pituitary).
- Anyone with a family history of growth disorders.

Red flags during the program

- Persistent joint pain >7 days
- Sudden weight gain or loss >3 kg/month
- Sleep regression despite clean sleep hygiene
- Mood changes lasting >2 weeks

Disclaimer

BeastRootMax content is for educational and motivational purposes. We are not licensed medical professionals. Consult qualified healthcare providers before starting any new diet, supplement or training program. Individual results vary.

BONUS · GLOSSARY

Term	Meaning
Anabolic	Building tissue. Sleep, protein and resistance training drive anabolism.
Catabolic	Breaking down tissue. Stress, starvation and overtraining drive catabolism.
Chondrocyte	Cartilage cell at the growth plate that divides under IGF-1 stimulation.
Cortisol	Stress hormone, antagonises GH.
Decompression	Mechanical lengthening of the spine via traction.
Epiphyseal plate	Growth plate at the end of long bones; closes at puberty's end.
GH	Growth Hormone, secreted by the pituitary.
IGF-1	Insulin-like Growth Factor 1, liver-produced bone-elongation messenger.
NREM	Non-REM sleep; stages 3-4 are deep slow-wave sleep.
Surplus	Eating slightly more calories than maintenance — required for growth.
Macros	Macronutrients: protein, carbs, fat.
Micros	Micronutrients: vitamins and minerals.
Wolff's Law	Bone adapts to mechanical load placed on it.

BONUS · FAQ

How fast will I see results?

Posture and decompression effects show in 2–4 weeks. Bone-mediated growth (if plates open) takes 3–6 months minimum to be measurable.

Can adults over 21 grow taller?

Long bones are usually fused, but functional height of 2–5 cm is recoverable through posture, decompression and disc rehydration.

Is the program vegetarian-friendly?

Yes — all chapters list veg substitutes (paneer, tofu, soy, dairy, legumes).

Do I need a gym?

No. A pull-up bar in a doorway and the floor is enough.

Can I combine this with sports?

Yes — swimming, basketball and volleyball pair well. Avoid stacking maximal squats on heavy training days.

What if I miss a day?

Resume the next day. Don't try to make up calories or stretches; consistency over compensation.

What about steroids/HGH?

We do not advise or recommend exogenous hormones. Risks far outweigh height gains and they're illegal in most countries without prescription.

FINAL WORDS

"You bought the protocol. Now earn the height."

This is the end of the Elite pack. Everything you need is in your hands. Print the diet chart. Hang the stretch routine on your wall. Set the alarms for sleep. Then come back in 90 days and tell us how much you grew.
